About this year's graphic / Each quarter of 2014 is represented as a circle divided into two arcs – one for the total hours of light and the other the total hours of dark in Minneapolis, MN USA. The arcs for each quarter have been colored using a gradient that represents the season's quality of the light (nobody said info graphics can't have a subjective layer). The circles are then set concentrically and rotated clockwise to offset each of them by a quarter turn.
